DYNACONTROL
EU728

PASSENGER CAR | ULTRA HIGH PERFORMANCE

ULTRA HIGH PERFORMANCE

We dedicated our efforts to creating a series of UHP tires capable of managing the amplified speed, torque, and G-forces brought on by extra horsepower, improved brakes, and a sports-tuned suspension system. These tires possess dependable performance traits and safety measures, allowing you to sit back and savor your drive.

DYNACONTROL ***EU728***

The DynaControl EU728 is a high-performance tire that delivers superior handling and traction, offering drivers a sportier ride and an enhanced driving experience. Crafted with advanced nano-reinforced materials, it delivers excellent handling and mobility on both dry and wet surfaces. Whether you're on winding mountain roads or cruising down the highway, the DynaControl EU728 will provide a smooth, comfortable, and safe ride every time.

HIGH-SPEED HANDLING

The importance of handling cannot be overstated when it comes to ensuring safety, vehicle stability, and an enjoyable driving experience. Tires are instrumental in achieving proper handling, especially at high speeds.

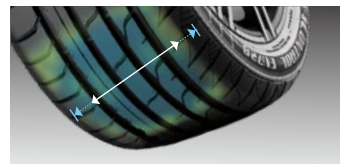

Optimized Shoulder Design

The curved shoulder design helps prevent torsion while contacting the road.

Extra Support

The Frame Rigid-Balancing Technology prevents twisting of the carcass, thereby boosting the friction on the sides for better handling while turning.

Quick Response

Wider tires with lower aspect ratios benefit handling performance and have more to do with wider contact patch shapes.

INNER & OUTER DUAL-PITCH

Outer Pitch

The optimized number of outer-pitch ensures steering grip in rough cornering while reducing noise from the tire tread.

Inner Pitch

The dual-pitch design secures space for improved water drainage by increasing the inner-pitch number, thereby further improving the tire's anti-slip performance and braking performance in wet conditions.

VERY HIGH SAFETY

The DynaControl EU728 is a high-performing tire that enhances vehicle safety with shorter braking distances, better lateral grip, and improved control compared to standard tires.

Skid Protection

Cutting-edge contour and asymmetric pattern design effectively cut water film, improve wet braking performance, and provide excellent skid protection.

Breaking Performance

High-elastic rubber formula combined with nano-reinforced material shortens the braking distance. The sidewalls are narrower to create room for larger brakes.
